fussey|piling

Fussey Piling is one of the country's leading sheet-piling specialists. All types of steel pile driving techniques are offered, from traditional crane-suspended drop hammers and piling vibrators to the very latest telescopic leader rigs and new effectively silent and vibration-free techniques.

We pride ourselves on having a well-maintained fleet of the latest sheet piling equipment available, which is ideally suited to safely and efficiently meet the demands of modern construction sites.

From our large stocks of used piles we can commence on site with very short lead-times.

We are able to offer advice for your particular piling scheme and can speedily complete preliminary design work to assist with budgeting. Once the scheme has been developed we can fully design, specify and provide competitive quotations for permanent works, temporary works, or temporary piles that may be left in. We can also offer a range of sheet pile sealants to provide short term to permanent fully sealed walls, cofferdams and basements.

We specialise in restricted access city centre type sites and steel intensive basements, as well as installing piles on the more traditional construction sites. Sheet piles provide very quick, economic and convenient construction methods compared to contiguous and secant walls.

Please contact us at our main piling office in Kingham, Oxfordshire to see how we can help you.
